Claims

- 1. An adhesion preventive material comprising a cross-linking polysaccharide derivative containing at least one active ester group introduced in a polysaccharide side chain, which is capable of reacting with an active hydrogen-containing group, and being capable of forming a crosslinked material due to covalent binding of the active ester group and an active hydrogen-containing group upon contact with water under an alkaline condition.
- 2. The adhesion preventive material according to claim 1, wherein the hydrogen active-containing group is a hydroxyl group in a polysaccharide molecule, and the polysaccharide derivative is self-crosslinking.
- 3. The adhesion preventive material according to claim 1 or 2, wherein the active hydrogen-containing group is an active hydrogen-containing group on the biological surface, and the polysaccharide derivative has adhesiveness to the biological surface.
- 4. The adhesion preventive material according to any one of claims 1 to 3, wherein the active ester group is an ester group in which an electrophilic group is bound to carbonyl carbon thereof.
- 5. The adhesion preventive material according to claim 4, wherein the electrophilic group is a group introduced from an

N-hydroxyamine based compound.

- 6. The adhesion preventive material according to any one of claims 1 to 5, wherein the polysaccharide derivative contains the active ester group in an amount of from 0.1 to 2 mmoles/g on the basis of the dry weight thereof.
- 7. The adhesion preventive material according to any one of claims 1 to 6, wherein the polysaccharide derivative further contains a carboxyl group and/or a carboxyalkyl group.
- 8. The adhesion preventive material according to any one of claims 1 to 7, wherein the polysaccharide derivative is of a non-salt type.
- 9. The adhesion preventive material according to any one of claims 1 to 8, wherein a raw material polysaccharide into which the active ester group is introduced is a polysaccharide which is soluble in an aprotic polar solvent at a temperature between 60 °C and 120 °C in a non-salt type thereof in a precursor stage of the crosslinking polysaccharide derivative containing a carboxyl group and/or a carboxyalkyl group.
- 10. The adhesion preventive material according to any one of claims 1 to 9, wherein the raw material polysaccharide into which the active ester group is introduced is a polysaccharide which contains neither a carboxyl group nor a carboxyalkyl group by itself.
- 11. The adhesion preventive material according to any one of claims 1 to 10, wherein the alkaline condition is in the

pH range of from 7.5 to 12.

- 12. An adhesion preventive material comprising a cross-linking polysaccharide composition containing (A) the cross-linking polysaccharide derivative as defined in any one of claims 1 to 11 and (C) a polymer other than the polysaccharide derivative (A).
- 13. An adhesion preventive material comprising a cross-linking polysaccharide composition containing (A) the cross-linking polysaccharide derivative as defined in any one of claims 1 to 11 and (B) a pH adjuster in a non-mixed state with the polysaccharide derivative (A).
- 14. The adhesion preventive material comprising a cross-linking polysaccharide composition according to claim 13, which further contains (C) a polymer other than the polysaccharide derivative (A).
